Fund Description

The 3-7 Year U.S. Treasury Index Fund is an exchange-traded fund (ETF) that aims to capture, before fees and expenses, the returns of The BofA Merrill Lynch 3-7 Year US Treasury IndexSM. This index typically contains the bellwether 5-Year Treasury note, along with U.S. Treasuries moderately shorter and longer in maturity. By tracking the index, the Fund aims to achieve, the yield and duration exposure inherent in this index.

Investor Benefits

The ETF structure allows for trading throughout the day and has the same expense ratio for all investors, regardless of size. Fund shares are publicly traded, offering accessibility to any investor who can access a major stock exchange.

Potential benefits of this Fund include:

- Seeks to reduce bid-ask spreads and premium/discount to NAV by using a liquid basket with fewer bonds than the index
- Low default risk, as U.S. Treasury securities are backed by the full faith and credit of the U.S. Government for capital preservation
- May provide higher yield than Treasury securities maturing within 3 years
- With maturities ranging from 3 to 7 years, price fluctuations due to interest rate changes may be moderate

The Fund Advantage

The Fund maintains exposure to liquid, high quality U.S. Government debt securities in seeking to track the underlying index. PIMCO's expertise in fixed income management may reduce tracking error and provide a solid foundation for robust secondary market trading. Index replication is a natural extension of PIMCO's investment platform, and index ETFs facilitate access to PIMCO's execution and risk management expertise.

Investors should consider the investment objectives, risks, charges and expenses of this Fund carefully before investing. This and other information are contained in the Fund's prospectus, which may be obtained by contacting your PIMCO representative. Please read the prospectus carefully before you invest or send money.

Performance quoted represents past performance. Past performance is not a guarantee or a reliable indicator of future results. Current performance may be lower or higher than performance shown. Investment return and principal value will fluctuate, so that Fund shares may be worth more or less than their original cost when sold or redeemed. Performance data current to the most recent month-end is available at www.pimcoetfs.com or by calling (888) 400-4383.

About PIMCO

PIMCO, founded in 1971, is a global asset management firm serving a full range of institutional and retail investors worldwide. Our reputation as one of the world's top asset managers rests on our combination of a long-term investment approach, superior client servicing and cutting edge technology. With offices in nine countries in North America, Europe and Asia, we manage investments across a full spectrum of global financial markets. Our success is built on our ability to consistently provide attractive returns while maintaining a strong culture of risk management and long-term discipline.

Shares of the Fund are not individually redeemable and may only be acquired from and redeemed to the Fund in Creation Units. Investors may buy or sell individual shares in secondary market transactions that do not involve the ETF. Shares of the Funds are bought and sold at market price (not NAV). Brokerage commissions will reduce returns. Investment policies, management fees and other information can be found in the individual ETF's prospectus. The market price is determined using the midpoint between the highest bid and the lowest offer on the listing exchange, as of the time that the Fund's NAV is calculated.

An investment in an ETF involves risk, including the loss of principal. Investment return, price, yield, and NAV will fluctuate with changes in market conditions. Investments may be worth more or less than the original cost when redeemed. U.S. Government securities are backed by the full faith of the government; portfolios that invest in them are not guaranteed and will fluctuate in value. Derivatives may involve certain costs and risks such as liquidity, interest rate, market, credit, management and the risk that a position could not be closed when most advantageous. Investing in derivatives could lose more than the amount invested.

The value of most bond funds and fixed income securities are impacted by changes in interest rates. Bonds and bond funds with longer durations tend to be more sensitive and more volatile than securities with shorter durations; bond prices generally fall as interest rates rise. Duration is the measure of a bond's price sensitivity to interest rates and is expressed in years.

The credit quality of a particular security or group of securities does not ensure the stability or safety of the overall portfolio. The Average Credit Quality ratings are provided to indicate the credit worthiness of the underlying bonds in the portfolio and generally range from Aaa (highest) to B (lowest).

Current holdings are subject to risk. Holdings are subject to change at any time. The per share NAV of the Fund is calculated at the end of each business day, and fluctuates with changes in the market value of the Fund's holdings. The trading prices of the Fund's shares fluctuate continuously throughout the trading day based on market supply and demand, which may not correlate to NAV.
